REPORT

Certificate "Allergiker-freundlich" for High-grade Clay paint no. 331

- By order of:** Dr. Markus Lettau (AURO AG),
Alte Frankfurter Str. 211,
D-38122 Braunschweig
- Expert:** Prof. Dr. habil. Friedhelm Diel (Dipl.-Ing.)
- Quality management:** INSTITUT FÜR UMWELT UND GESUNDHEIT – IUG, Petersberg Fulda
- Time schedule:** Oct 2017 - Feb 2018
assessments according to REACH (EU 01-07-2007)
in agreement with the statements of the AVE e.V.
- Aim of the study:** Test and material assessment of "High-grade Clay paint no. 331"
as to be recommended for indoor use for allergic persons.

Summary and conclusions:

The olfactory emissions of the tested wall paint were examined and found to be marginal. Hedonic effects are undetectable. After a thorough inspection of the presented examination reports, voluntarily prepared safety data sheets following REACH standards and company data on the composition of possible emissions of substances during the proper use of the product, and particularly because of the omission of materials with high allergic potential and binding agents that could be harmful to one's health, the product is awarded the seal „Allergiker-freundlich“ („suited for allergy sufferers“) of the IUG for two years.

The seal loses its validity two years after the date of issue (on March 1, 2020) unless it has been previously prolonged by the IUG.
